

Lady Liver

1st Session - 8 June 2004 - 44 yrs at the time
Completed 21 x 2 hr sessions

Where did my liver disease go?

Session One.

Lady Liver presented with a liver disease, chronic active hepatitis. She'd had the disease for 25 years and was told by her Specialist that there was no known cure for the disease and she would eventually die of cirrhosis of the liver.

After the first session there was some physical sensations for a few days. She said she also felt fragmented and vague and had trouble making decisions and that it was unusual for her to be like that.

Session Two.

One week later she arrived for her second session saying she felt really happy and satisfied.

Lady Liver was a very good "breather", her breathing was full, connected and rhythmic. She was clearing density from the cells of her body more quickly because her breathing was excellent. She saw lots of unfamiliar images on the screen of her mind and experienced a lot of vibration in her body during her sessions.

After Session Six,

Lady Liver visited her Doctor and had her regular blood test. **She said the result was extraordinary.** The normal range for the liver text is 0-40. In 25 years it has never been normal, it had always been 78 - 82 and never moved from this unless she was sick and it went up to 220.

The indicator said, it was now 37 and in the normal range between 0-40.

She said "I was so excited" I rang my partner and I cried and cried. The next day, I couldn't believe it. I will be able to reduce my medication. This condition is rare, there is only 150 people in Australia with this condition and nobody has ever recovered from it. I see my specialist next week."

Lady Liver also noticed that she was not reacting to things as much, either positive or negative, she felt neutral and a bit surreal. She noticed she was interacting with people differently. She was calm and more balanced.

Through the life-skills teachings she was becoming more aware of her own thoughts and words and was catching herself and choosing her language more powerfully.

She was practising "breath awareness" daily.

Lady Liver

She had her blood re-tested and this time it blew out to the 300's. I had explained to her earlier in her sessions that the process of healing would most likely mean the condition will peek and move around before it stabilizes. We certainly had movement happening. She was feeling like she was depressed and in a black hole for three to four days. (A healing release).

The third blood test showed a normal result... once again, 37. She was relieved and ecstatic.

Seven years have since passed and Lady Liver still remains in the normal range.

We release 70% of toxins through the breath!!

FREEDOM IS LITERALLY ONLY A BREATH AWAY!
