

## Metaphysical Science - What is it?

**METAPHYSICS** - the word metaphysics has been around for a long, long time. ORIGIN: Mid 16th century. It goes back to the Aristotelean philosophy, Plato himself credited earlier philosophers with dealing with metaphysical questions. The first known philosopher, according to Aristotle, is Thales of Miletus, who taught that all things derive from a single first cause or Arche. It is the science of things transcending what is physical or natural.

Prior to the modern history of science, scientific questions were addressed as a part of metaphysics known as "natural philosophy". Originally, the term "science" (Latin *scientia*) simply meant "knowledge".

noun: **metaphysics**

the branch of philosophy that deals with the first principles of things, including abstract concepts such as being, knowing, identity, time, and space."they would regard the question of the initial conditions for the universe as belonging to the realm of metaphysics or religion"

In modern terms, from the University of Metaphysics - metaphysics is an academically speculative philosophy. It is spirituality based on decades of spiritual psychology consciousness research. It is a philosophy which honors all religions, spiritual paths, faiths and beliefs.

Three of our great ancient Philosophers and Metaphysicians were Socrates, Plato & Aristotle.

**"The unexamined life is not worth living." -- Socrates**

**Metaphysics** is a traditional branch of philosophy concerned with explaining the fundamental nature of being and the world that encompasses it, although the term is not easily defined. A person who studies metaphysics is called a *metaphysician*. The metaphysician attempts to clarify the fundamental notions by which people understand the world, e.g., existence, objects, and their properties, space and time, cause and effect and possibility.

Metaphysics is a huge and interesting subject and I have only touched the surface of it in my brief (above) description.

I have loved Metaphysics since I was a young child (although I didn't know what it was back then), who we are as human beings and what existed before we were born; what comes after we pass on; what is reality, where does it come from; what is beyond us, the universe, cosmos and our connection to it; has been a life long interest and passion. It is exquisite! - and there is so much to learn.

In practical terms, for every day life - **Metaphysical Science** addresses the whole person, mind, body and soul. It addresses thought, feeling and action in relationship to a person's world perception and reality. How to understand and change perception and reality for the highest purpose of each individual, and the world and universe we live in.

Metaphysics is exciting, interesting, transforming, practical and fulfilling.

## **Metaphysical Science - What is it?**

The most wonderful part of my work is witnessing the personal transformation that takes place within people. The individual's awakening, and experiencing of their own Souls Light, and the joy and emotion that floods forth is indescribable. They become progressively powerful, loving and wise as the integration of mind, body and soul takes place.
